### **DETAILED ACTION**

This application is in condition for allowance except for the following formal matters:

#### **IN THE SPECIFICATION:**

- On page 8, line 14, "connectors 420 and 426" should be change to -- connectors 422 and 426 -- in order to be consistent with Figure 4 of the drawing.

#### ***Allowable Subject Matter***

Claims 1-49 are allowable over the prior art of record because none of the prior art whether taken singularly or in combination, especially when these limitations are considered within the specific combination claimed, to teach: a system comprising: a control circuit, among others as claimed in independent claim 16, for generating an input signal for the first of the serially-connected word line driver initialization circuits when a power supply operably coupled to the memory circuit first achieves a first predetermined voltage, and a plurality of data circuits for conveying a data pattern on to the bit line of the memory array during the pulsing of the word line groups; means for asynchronously pulsing successive word line groups of one or more individual word lines of the memory array while conveying a data pattern onto bit lines of the memory array, and among others as claimed in independent claim 44. Method for initializing a memory cell comprising step of asynchronously pulsing successive word line groups of one or more individual word lines of the memory array while conveying a data pattern onto bit lines of the memory array, and among other as claimed in independent claim 1.

***Conclusion***

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Oh (6,011,746) discloses a hierarchical word line driving structure uses a shared inverter circuit, which allows for lower power consumption and a pulsed control signal to ensure accurate memory retrieval.
